

Biomass Boiler Workshop

May 6 and 7, 2026

Richmond, British Columbia

The Biomass Boiler Workshop is a premier event for representatives from the Pulp and Paper, Forest Products, Food Industries, Power Sector, Independent Power Producers, and Energy-from-Waste Industries to learn and network. In May, our Workshop partners with the Western Canada BLRBAC meeting! The Workshop will occur right after the meeting's conclusion in beautiful Richmond near Vancouver, British Columbia.

This unique workshop comprises presentations and discussions of the latest technology to improve performance, fuel firing capacity, reliability, and operational flexibility of boiler systems.

- 🔥 Learn about the latest retrofit technologies for biomass and other solid, liquid, and gaseous fuel fired boilers and associated equipment.
- 🔥 Explore how other plants solve their boiler area challenges.
- 🔥 Receive information for solutions to meet specific goals.

Over our 50-year history, Jansen has upgraded over 125 biomass and other solid fuel fired boilers. Our upgrades have:

- 🔥 Increased fuel firing capacity.
- 🔥 Reduced fossil fuel consumption and lowered carbon footprint.
- 🔥 Improved emissions performance (CO, NOx, VOC, TRS, particulate matter).
- 🔥 Improved char burnout to minimize unburned losses.
- 🔥 Lowered erosion by limiting ash carryover.
- 🔥 Enhanced heat capture resulting in higher power generation, lower stack gas temperatures, and increased efficiency.
